

Why Patent Applications Increase in a Down Economy

By David S. Karpman, Esq., Law Office of David S. Karpman, Esq.

Economic downturns have led many companies to increase their patent applications, despite the fact that the economy is still in a recession.

Patents are a valuable asset for any company, and they are a key factor in determining a company's value. In a recession, companies are more likely to sell their patents, and they are more likely to license their patents to other companies. This is why many companies are increasing their patent applications.

Progress possible

"Organizations continue to evolve, and we need to make sure that our business models are aligned with the changes that are taking place," says Michael D. Smith, president of the International Institute for Management Development. "Organizations need to ensure that they are able to adapt to the changes that are taking place."

Smith also notes the importance of a strong foundation of the organization as a company and a good relationship with the business community. "It is important to ensure that the company is able to adapt to the changes that are taking place."

"Formulating a solid marketing strategy is an absolute prerequisite for achieving long-term profitability," says Ralph Bock, managing director of the Marketing Center of Excellence at Continental. "An effective marketing strategy is a strategic business decision that defines the brand, identifies the target audience, and determines the value proposition for the target audience."

"Marketing is a continuous process that requires constant communication and collaboration between all departments of the company," says Bock. "Marketing is not just a department, it is a mindset."

"The marketing team is responsible for creating and implementing the marketing strategy, which is a plan of action for the company's marketing efforts. The strategy is based on the company's mission, vision, and values."

businessmen themselves are engaged in huge industry consolidation efforts, and the industry is ripe for consolidation.

"In the past, following their retirement, people would deposit the bulk of their savings in equity securities or collect interest from investments in real estate or other income-producing assets."

"But now, they're more comfortable with equity investments and are looking for higher returns in diversified equity investments. They're looking for growth, and they're looking for income. They want the best of both worlds—growth and income."

Johnson then identified a number of key trends, including: "increasingly aging investors, who are looking for income; a globalized world, where they're looking for growth; and a growing need for liquidity."

John Johnson, President and Managing Director of Johnson Investment Management, LLC

He also pointed to fully and actively diversified equity investments as the best way to achieve a long-term return.

Johnson also noted a new trend in global investing, which

he says is driving the investment industry. "We're seeing a lot of money coming out of the U.S. and into emerging markets, and that's driving a lot of growth in those markets."

Johnson also noted that the industry is seeing a lot of consolidation, and that's driving a lot of growth. "We're seeing a lot of money coming out of the U.S. and into emerging markets, and that's driving a lot of growth in those markets."
